

In 2008, wind tower lifts installed in Iowa were granted a temporary exception from the ASME standards for elevators. The temporary exception does not apply to any wind tower lift included in a contract executed after March 12, 2009.

The temporary exception continues past April 2, 2009, only if the manufacturer of the wind tower lift filed an appropriate affidavit with the Labor Commissioner by April 2, 2009. Wind tower lifts not subject to the temporary exception must comply with ASME A17.1 or A17.7.
